## DETAILED ACTION

### *Specification*

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: The limitation of Claim 2, that the solvent can be methyl alcohol, ethyl alcohol, or isopropyl alcohol, is not described in the specification.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 is vague and indefinite since it is not clear if the pH requirements are only in reference to the water solvent or also with the alcohol solvents. Please clarify if the pH limitations are required with the alcohol solvents.

### *Allowable Subject Matter*

35 U.S.C. 112, second paragraph, set forth in this Office action

Art Unit: 1762

6. The following is an examiner's statement of reasons for allowance: None of the prior art cited or reviewed by the examiner teaches or fairly suggests preparing a chemically bonded ceramic, where the slurry of the hydroxide ceramic is heated to produce a dehydrated oxide ceramic and then impregnating the dehydrated oxide ceramic with a phosphating agent and heat treating to seal the pores in the ceramic.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Talmy et al. and Fuchs et al. are cited as prior art of interest.

Talmy et al. teaches treating a ceramic with phosphoric acid and then heat treating.

Fuchs et al. teaches adding a phosphating agent to a dehydrated ceramic slurry and then apply the slurry to a substrate.
